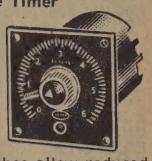
Type 474A-A & 474A-AE All-Purpose Timer



Two basic functions these reset timers perform: INTERVAL TIMING, where the timer controls the time during which the load is energized; and DELAY TIMING, where the time delay is required before a load is energized. The 474A-AE timer can be operated from a sustained or momentary contact switch. The 474A-A timer differs from 474A-AE in that it does not have a solenoid actuated switch or pilot light. Cam actuated switches allow reduced actuator over-travel and greatly extend switch life. Switches are rated at 10 amp, 125 or 250 VAC. ⅓ HP at 125 or 250 VAC; 15 amp switches special order. Repeat accuracy ±0.4% full scale. Motor, 2.7 watts; clutch 4.0 watts AC at rated voltage 115VAC/60Hz.

Grigsby Barton DIP Dry Reed, Mercury Relays

Shielding and Coil Suppression

Grigsby-Barton DIP Reed Relays are available with internal clamp diodes. These diodes are connected directly across the coil and are used to suppress back EMF from the coil where driver protection is necessary. Magnetic shielding is integral by virtue of lead frame design and eliminates magnetic coupling of adjacent relays.

This family of dual in line Reed Relays offers a complete selection of contact configurations, coil voltages and packaging. Choose from JEDEC TO-116 case size or .275" high commercial version. Forms include dry-reed Form A, 2 Form A and Form C; mercury-wetted, position insensitive Form A. Coil voltages of 5, 12 and 24 volts interface directly with DTL, TTL and HTL logic without additional buffering. Contact ratings range up to 10 watts DC in Form A and 3 watts DC in Form C. Pin spacing conforms to the standard DIP lead spacing.

All models fit standard 14-pin receptacles and can be inserted automatically. 8-pin models are designed for direct printed circuit board mounting where it is desirable to drill only 8 holes. Internal clamp diodes available on some models, for protection of drivers, by suppressing back EMF. Electrostatic shielding is available on some models to eliminate magnetic coupling of adjacent relays. New techniques in semi-automated assembly, transfer-molding and automatic testing provide dependable and environmental protection at a low initial cost.

POTTER & BRUMFIELD General Purpose Relays

R10-E1: SOLDER TERMINALS, STUD OR PLUG-IN SOCKET MOUNTING.

Two times more pull force-optimum distribution between magnetic core and pole piece cross sections and coil volume, and a low reluctance armature bearing produces a fore-displacement product of 140 gm/mm at .050". This results in higher contact pressure and greater over-travel. DC operated industrial relays provide sensitivities to 125 mW per pole. Three custom contact styles available for 100 mA, 2 amp or 5 amp load. DPDT to 6PDT contact arrangements. U/L recognized file# E42810. Operating temperature -55- to +72-C. Weight 22 to 40 grams. (Final suffix of type number signifies coil ohms.) Sockets include wire retainer and pre-installed grounding provision.

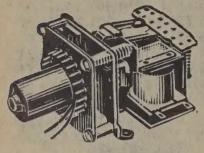
MER-SOL STEP RELAYS



The same as MER Stepper above but with an added Solenoid. Energizing the solenoid physically moves the wiper (S) away from the deck. This allows advance or reset of the wipers without contacting the deck. This innovation adds many switching circuit advantages as well as increasing contact capacity and increasing electrical life. The power input to step magnet is reduced from 35VA to 20VA on this particular unit, (Solenoid is meant to be energized whenever reset coil is energized), because of the greatly reduced friction during reset. 20.8 Watts 20.9 wvolt Amperes 24 points 22 Active contacts 20 Steps P/S. Size L 4⅜" W 3⁵⁄₁₆" H 2³⁄₁₆". Shipping weight 14 oz.

Available in both intermittent and continuous duty types. Intermittent types should not be energized for more than 5 consecutive minutes, or be permitted to rise more than 85° C. above 24° C. ambient, without giving sufficient time to cool between operation cycles. Continuous duty types are designed so they will not rise more than 85° C. above the 24° C. ambient temperature when operated at rated load. Plunger has slotted end with 1/8" diameter hole for coupling.

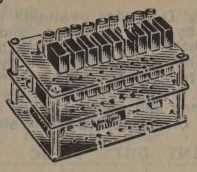
Guardian Relays

•NEW SLS 100 SERIES



Steppers are the only power solid state steppers to accept either high level or logic level inputs with high noise immunity for industrial applications. Output of each step is a 120 VAC 2½ amp switch, constructed so that many configurations can be accomplished from stacked modules. Standard "off the shelf" models have ten or twenty steps. Units may be obtained with pulsers to make them self-stepping steppers. They can be cascaded or paralled to perform complex switching and control functions. Built for operation on input power of 120 VAC, 50-60 Hz or 400 Hz and 24 VDC. All solid state construction offers the advantages of mechanical noise free operation and under proper operating conditions, practically unlimited life.

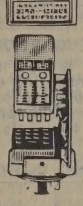
SERIES IR-BDT

•WILL OPERATE ON LOW OR HIGH LINE
•REPLACEABLE ELECTRO-MECHANICAL RELAY



Time delay incorporates an all silicone transistor circuit which operates over a wide input range of 75-125VAC 50-60 Hz, and draws only 5 ma prior to time out. Temp. stability is inherrent. Positive reset of the tantalum capacitor is assured by the use of internal control. Solid state circuit by design is immune to transient noise found on commercial power lines. Transient voltages up to 2500 volts peak (short duration) can be tolerated. Output 5 amp DPDT contacts (output relay U/L listed). Accuracy thru temp and volt range 10%. Size 2⅕"H x 1½"W x 1⅗"D.

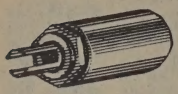
Guardian Solenoids

PULL TYPE SOLENOIDS



Tubular Solenoids from a 7/16 to a 1½" Diameter available in both Intermittent and Continuous Duty 24VDC. Clear design allows side by side mounting, and permitting easy installation just insert threaded bushing through chassis hole and tighten furnished nut. Computers, Aircraft and missels, Office Equipment and Copy Machines are some of the typical applications for these products. Intermittent Types cannot be energized for more than 1 minute or be permitted to rise more than 85°C above 25°C ambient, without giving sufficient time to cool between operations. Continuous Duty Types are designed so that they will not rise more than 85°C above the 25°C ambient temperature when operated at rated load. Life expectancy at rated load is 10 million cycles.

• NEW PUSH TYPE SOLENOIDS

The T3.5, T4 (in two lengths) and the T6 have been fitted with non-magnetic metal push rods which push out from the threaded mounting end of the solenoid and are designated as TP3.5, TP4, and TP6 types in tubular solenoid construction the push types are equal in "lift" to pull type. For all push type tubular solenoids in the table below the lengths of the push rods are the same as the maximum stroke lengths specified. Hex nuts as well as "L" shaped brackets for either panel or surface mounting are furnished.

8P4

Two-part systems employ integral receiver units (containing photo-cell and relay) and prefocussed light sources. Three-part systems have miniaturized light sources and receivers, for use where space is limited; receivers connect to remote amplifier-relay units.

TWO-PART (INTEGRAL RECEIVER) SYSTEMS

All units operate from 115 VAC, 50/60 hz, and are housed in NEMA type 1 only enclosures. Complete system consists of 8L3 light source plus receiver unit appropriate to application. Operate over a 12 foot range; no inter-wiring necessary.

8P3, 8P5 & 8P6 General-Purpose Receiver. For switching rates up to 600 operations/minute contacts rated 10A or 28VDC/115VAC. Wt., 13 oz.

8P8, 8P9 and 8P10 High-Speed Receivers. Operate 1200 times per minute. Relay contacts rated 5A at 28VDC/115VAC, 2.5A at 230-VAC. 8P8 comes with wire leads, ½" conduit bushing and mtg. bracket 8P9 has bracket and octal plug. Wt., 13 oz.

8RCO1A & 8RCO2A Miniature Low-Cost Receivers. 120 cycles/minute switching. Plug-in units fit standard 5-pin socket; SPDT relay contacts rated 3A at 28VDC/115VAC. May be used for beam-breaking or fluctuating-intensity applications: 8RCO1A relay picks up at 5 foot-candles, drops out at .1 fc.; 8RCO2A for high-ambient-light conditions, picks up at 5 fc; opens at .5 fc. Supply voltage 115V 60 Hz, UL approved. Wt., 3 oz.

8L3 Light Source. Provides actuating beam for all 8P and 8R receivers. Set to span up to 12 feet. With mounting bracket, ½" conduit bushing, and 16" leads (18 AWG). Wt., 13 oz.

SERIES 801 T-BAR RELAYS

Reliable, untra-compact, solenoid actuated relays with a unique design employing stacked-up enclosed contact wafers for up to 60-pole switching. Ideal for aircraft, telemetry, communications, computers. Gold plated silver contacts are rated to carry 500 watts resistive (5 amps), make or break 3 amps. Less than 30 milliseconds operate and release time. Min. life: 20 million mechanical operations. 1000 VAC dielectric strength, terminal-to-case; temperature range —55 to +85°C. Terminals will mate with T-Bar Connectors (below), which simply push onto contact wafers for quick, easy wiring, or solder connections may be made. Contact assemblies are in dust-tight plastic enclosures which measure 1 1/32" wide by 2 3/8" long; height is 13/32" per 12 pole wafer.

T-BAR RELAY COIL CHARACTERISTICS

All characteristics are nominal and subject to normal manufacturing tolerances. All are for continuous duty. 115 VAC units have a full-wave bridge rectifier and use the same coils listed under 110 VDC. Operate at 80%, release at 20% of nominal voltage. Actuator assembly size: 1.375" mtg. centers x 2 1/32" high, except one-water relay use a shorter actuator (1 15/32" high).

Model 7012

Time delay on pull-in. Timing cycle begins when coil is energized. Coil kept energized throughout delay period preceding DPDT contacts transfer. Coil de-energized: contacts retransfer immediately (25 m-sec). Coil de-energized during time cycle, contacts transferred & timing mech, resets to start position for full time cycle on nect energization of coil.

Model 7022

Time delay on drop-out. Coil energized: DPDT contacts transfer & stay in transfer position. De-energization coil: Time delay begins. Timing cycle contacts stay transferred. End time delay setting: contacts transfer back to de-energized position. Coil re-energized during time cycle; contacts remain transferred, produce full time delay upon next de-energization if coil remains de-energized through time setting.

Auxiliary Switch Kits

SPDT contacts rated 10A/120, 240, 480 VAC. Type "T" provides immediate transfer of contacts for 7022 and two step timing to 100 sec. for both 7012 and 7022 models. Type "L" provides immediate transfer of contacts for 7012 models.

SERIES 9

Series 9 is a high speed permanent magnetic static motor that converts digital input pulses into incremental shaft output motion. Operates from any drive input that provides successive DC pulses of alternating polarity. Each pulse advances the rotor shaft (15º or 18º), latches it magnetically in place with accuracy of ±15 min. angular, non-culmulative. Damper must be used for speeds over 50 steps/sec. Rated continuous at 24VDC nominal. *Bi-Directional—2 9F02 drivers needed. Ohms/winding-.18, amps/winding 6.2 for all. Minimum detent is ½ of min. hold. External resistor—Ohms 3 .7, W 150. Amphenol Astro/348 Connectors

40E SQUARE FLANGE | 43E "D" HOLE RECEPTACLE | 46E PLUG

A major improvement in removable crimped-contact connection systems. Meet MIL-C-81511 specs. Have .085" contact spacing. Superior design qualifies these connectors for use in all applications—even where size may not be of first decision importance. Provide full performance under extreme environment, vibration or shock. Removable crimp contacts, grounded shells and choice of standard or long construction. 'No-Scoop' design prevents pin damage. In two constructions: '50% No-Scoop' (standard) prevents scooping when pins are in receptacle shell (80% of all applications); '100% No-Scoop' (long) prevents scooping when pins are in either receptacle or plug—best used in blind mating. Types do not intermate. Crimp contacts are held in the molded one-piece retention disc by a rear nut; a twist of the nut releases them for wiring changes, a second twist locks them into place. Wiring changes are made by extracting or inserting contacts with the proper tool.

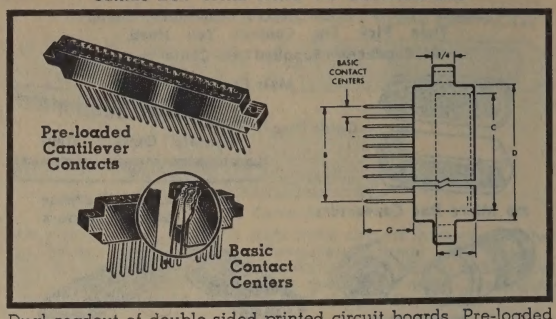
SERIES 261 WIRE-WRAP PC CONNECTORS



Dual readout of double-sided printed circuit boards. Pre-loaded cantilever-type contacts are assembled into dielectric with precise spacing for automatic solderless wrap terminations. Tail length is sufficient for three wire wraps plus space for bussing or PC board next to block. Contacts are confined in dielectric to determined pre-load force for fixed, definite separation eliminating possibility of shorts. Gold-plated phosphor bronze contacts rated at 5.0 amps. Voltage rating: 300 V rms at sea level. Minimum voltage breakdown: 1800 V rms. Contact resistance: 6.0 milliohms max. .025" square tail, with 50001-type contact. Key replaces one pair of contacts. See dimensions in tables below. **Dimension 'A' is overall length; 'E' is to mounting centers.**

PRECISION 7mm CONNECTOR

50 ohm coaxial connector designed for use with rigid 7mm air line. Sexless coplanar mating by means of threaded ring housed within coupling nut permits any two connectors in the 7mm line size to be interconnected. The electrical and mechanical contact is made in an identical plane permitting accurate determination of the electrical length of a mated pair of connectors or of an air line assembly with a connector on each end. All components of the connector are held captive.

CAMBION Coils, Coil Forms & Components

VARIABLE COILS

CAMBION coils are available on ceramic or molded polypropylene forms, or in unitized shielded housings offering both electromagnetic and electrostatic shielding. Tunable ranges provide overlapping inductances. Listing covers more popular ratings—if inductance range you want is not listed, order by Part No. and specify range desired.

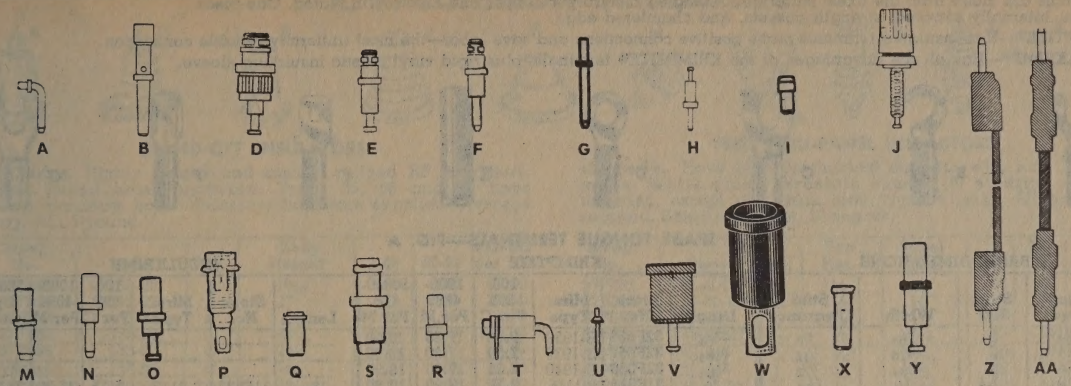
Connectors and Handles CAMBION



Wide variety of plugs and jacks make possible tight space-saving connections; offers reliable "pluggability" for individual components. Positive grip, with low contact resistance after many repeated insertions. Plugs (pins) and jacks are available for boards with different thicknesses. Suffix in type number indicates the size available. Order from Board Thickness Chart below adding the proper suffix to Type number for thickness desired.

Example: Type 1521-1 thru 3 is available for boards 1/32" thick (1521-1), 1/16" thick (1521-2) and 3/8" thick (1521-3).

Gold plated except: (†) Electro-solder and (**) Bright Alloy plating. Available with (††) black or red insulation, (†) black, red or blue wire insulation (#) black, red or white insulation.

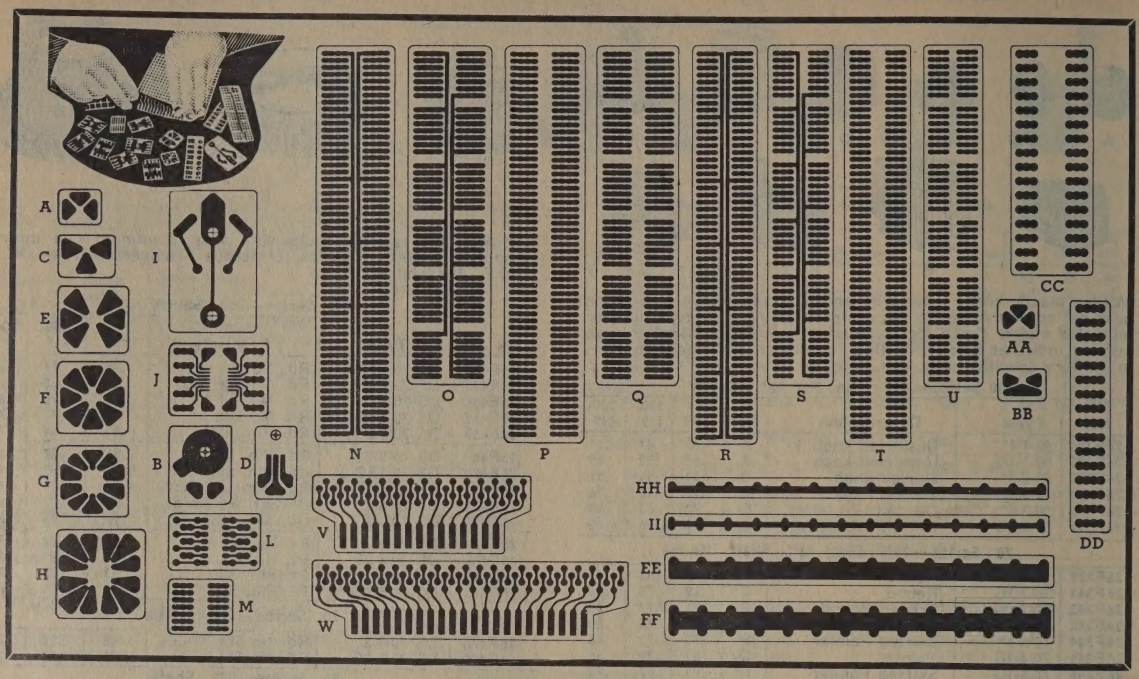
circuit-stik® Instant Circuit Boards



This new concept in circuit packaging now permits rapid assembly of all prototypes and limited quantity production systems directly from engineering schematics and logic flow diagrams.

All sub-element conductors are preplated and ready for soldering. The conductive circuit sub-elements are supplied on thin substances which have a pressure sensitive adhesive backing. They are designed to withstand soldering temperatures, and offer exceptionally good ahesion strength, yet can be quickly and easily removed when changes require a Circuit-Stik "instant" modification.

THE "1000" SERIES (MFR'S. TYPE) CIRCUIT-STIK SUB-ELEMENTS ARE PRE-DRILLED ON .100-INCH GRID— REQUIRE NO DRILLING AND NO TERMINALS.

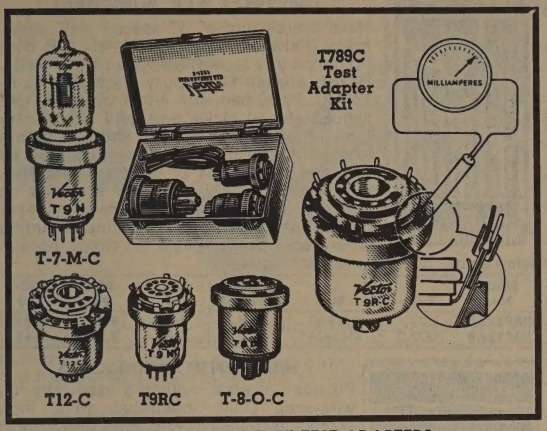
CURRENT AND VOLTAGE TEST ADAPTERS



COMBINATION TYPE TEST ADAPTERS

Permit measuring current and/or voltage in operating circuits from tube side of chassis without cutting leads. Adapter is placed in tube socket between tube and chassis. Measurements are made by inserting special dual sided probe into adapter tabs which opens circuit and provides current reading at any pin position wherever inserted. Voltage and waveform checks may be made by joining probe leads and connecting to meter. Adapters fit inside shield bases and tube clamps. Long lived Beryllium copper silver plated contacts and mica filled phenolic castings used throughout for long life.

PRE-PILOTED COPPER CLAD PANELS

Pilot holes for .125" dia. pilot pins are accurately punched at one inch intervals on a center line .125" from one precision sheared edge of copper clad boards to permit fast, accurate registration of boards to artwork, negative or silk screen. Holes provide reference points for drilling, routing or other mechanical processing useful for registering negatives when producing two-sided PC boards. V-notches, appearing every 3" along punched edge, allow quick alignment of holes for pilot pins. NEMA grade boards, 1/16" thick, clad one side or two, either plain or photosensitized.

TEFLON EXTRUDED TUBING

- **Will not Crack or Become Brittle During Aging!**
- **Will not Shrink During Soldering!**
- **Conforms to MIL-1-22129B**

Unmatched by any other type of tubing for use in electrical applications at high frequencies and temperatures; continuous operation at 250-C. Retaining its flexibility throughout termperature range. At high frequencies dielectric strength is many times that of other insulating materials; is chemically inert having zero moisture absorption. Thin wall tubing, **TFT 200.** permits miniaturization and compactness. Application where high heat resistant, flexible, non-flammable, chemical solvent and erosion-resistant material is required. Electrical and chemical properties conform to MIL-1-22129C. **Natural only.** Standard wall tubing. **TFT-250** has characteristics similar to TFT-200, but for use in application where additional dielectric values and mechanical strength are necessary. Colors: **Natural only. Min. order 100 feet.**

BELDEN Teflon Hook-Up Wire & Insulated Cables

TEFLON HOOK-UP WIRE

Concentrically stranded silver coated copper conductor, extruded TFE Teflon insulated. Teflon wire is recommended for miniature cable applications, because of their thermal and electrical properties. Also suitable for internal wiring soldering applications where insulation melt is a problem. Teflon wiring products are outstanding in their resistance to oil, oxidation, heat, sunlight, flame and in their ability to remain flexible at low temperatures. Have excellent resistance to ozone, water, alcohol, gasoline, acids, alkalis, aromatic carbon and solvents. *Specify color desired: 1-20 (see color chart).

POLYFOAM COAXIAL CABLES

Cellular polyethylene dielectric material provides lower weight, cost, capacitance, and attenuation than standard RG types. Widely used in commercial transmitter applications such as community TV and in ham stations. The dielectric constant is 1.50 as compared to 2.25 for solid polyethylene. It has a specially compounded non-contaminating black polyethylene jacket providing improved weather and abrasion resistance. *Sweep tested—1000 ft. min. order.

KYNAR® COMPUTER-TYPE HOOKUP WIRE APPROVED BY U.L. AND CSA

Especially suited for automatic point-to-point terminations in computer applications (back panel boards). Excellent abrasion characteristics and superior resistance to cold flow makes this type of mechanically tough insulation suitable for all areas where a large number of wires are used in close quarters.

Insulation is Kynar®, which is a vinylidene flouride plastic developed by Pennwalt. It is mechanically tough; flame retardant and self-extinguishing; highly resistant to ultra-violet and weathering. Its insulation characteristics remain unchanged when exposed to up to 300 million roentgens.

Operating temperature range: to +125°C continuous. U.L. Rating: 105°C. Conductor is (solid) OFHC (oxygen-free high conductivity) annealed copper. All are supplied on large sturdy hub reels. Available in black, red, orange, yellow, green, blue, gray, and white—**Specify Color by number.**

Electronic Power Types

Available in electronic-power component types providing a regulated source of plate and filament voltages. The CVF series provides 6.0 or 6.3 volts of output regulated within ±1% over line variations of ±15%. The series CVE series, a combination of the plate and filament types, regulates within ±3% Both series, which include filaments with stabilized voltage supplies, operates reliably, feature long component life, and need less servicing than competitor's materials. TYPE CVN NORMAL HARMONIC TYPE TRANSFORMERS

CVN type transformers provide the same ±1% regulation as the sinusoidal series. Contain an average of 20% rms harmonic content and are especially recommended for electrical loads not affected by harmonics, such as solenoids, relays, filaments, and where rectification is required. (†) indicates 95-130. (*) indicates 95-130/175-235/190-260. (**) indicates an input voltage of 190-260/380-520. (***) indicates 95-130/190-260. (††) indicates 190-260.

POWER SUPPLIES

Model SCRDC-111 Especially designed for use with logic circuitry and as a bulk power source for point of use IC regulators. Offer tight regulation for line and load, holding output voltage variation to within ±0.1% of nominal or 50 mv whichever is greater for an input of 100-130VAC, 50/60 Hz. Static load regulation ±0.5% of nominal or less for static output load change from zero to full load. Dynamic line regulation ±1.0% of nominal or less for line voltage change of ±10% within static range. Dynamic load regulation ±2.0% of nominal or less for step load changes of up to 25% of full load rating between 25 and 100% of full load. Recovery time from dynamic change to static band is less than 250 milliseconds. Output voltage varies less than .05% from 0°C to 40°C. Derate 2.5% per °C up to 50°C (with convection cooling). Input frequency range for all specifications 47 to 63 Hz. Ripple less than 1% of nominal or 300 mv whichever is greater. Efficiency 25 to 75% depending on output voltage. Standard 19 inch rack mounting. Can be used in tandem (series or parallel) for higher voltage and current ratings.

Deliver continuously adjustable output voltage from AC line. Zero waveform distortion, good regulation, conservative ratings. All are for 50-60 Hz. (*60 Hz only.) Enclosed for plane-surface mtg. except 10B, 10B-40, 21, 22, and other types with suffix "U" are open types for panel mounting. Mfr's Types 21, 22, 126, 136B, 226, 236B, 1156D and 1256D are for both panel and surface mounting. Suffix "T" indicates terminals enclosed in metal box† indicates when mounted on metal panel, for non-metallic panel, or bracket mounting, derate to 1.75 amps with corresponding reduction in maximum kVA

SINGLE-PHASE TYPES

Portable Types, 116B, 216B have 2-wire parallel blade input cord-plug sets and output receptacles. **In table indicates unit is equipped with 3- wire plug and receptacle. Type LW136B is a double-wound assembly with an isolated secondary winding. Type 22 incorporates a unique coil-winding technique designed to provide higher voltage ratings without increase in size or weight of transformer ††Rating when mounted on metal panel. Derated to 0.5 amp when mounted for non-metallic panel or bracket.

STACO DELUXE VARIABLE AUTOTRANSFORMERS

Designed to meet U/L and CSA standards of safety. Main features are: laminated silicon steel cores ensuring low core loss and low excitation current; continuous voltage control over a wide range; negligible waveform distortion; rugged mechanical construction; neon pilot lights; permanently etched legends; tamper-proof and mar-resistant ventilated case; NEMA approved standard 6-ft. cord and receptacle; moderate voltage drop under load; effeciency as high as 98%; and regulation better than 5% can be attained. Units are protected from overload damage by a thermal circuit breaker. A three-position switch enables selection of "line voltage" or "over voltage" (e.g., 0-120/140 V. on 120 V input) from the off position. Convenience outlet (10 or 15 amps) is energized from the moment line cord is plugged in. Optional voltmeter, ammeter and wattmeter; use suffix "V" for 0-150 VAC voltmeter, suffix "A" for dual range 0-2 and 0-10 amps full scale ammeter, suffix "W" for dual range 0-300 and 0-500 full scale wattmeter. Metered units are supplied with isolated AC and DC outputs rated for 10Z of the total output rating of the unit; available at banana jacks in the front panel.

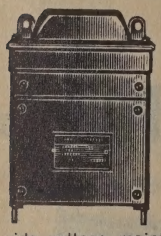
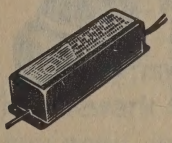
AC VOLTAGE STABILIZERS





Static - magnetic transformer type units provide voltage maintained within ± 1% while input fluctuates ±15%. Unfiltered output waveform is relatively flat-topped, 15-20% harmonic content; filtered types provide near-sinusoidal output, maximum harmonic content 3%. All units are for single-phase, 60 cycle AC only; stabilized output 118V except as noted. Completely enclosed, with enclosed terminals, except units rated below 250 V-A have insulated cable leads.

Unfiltered Types. All have 118V output

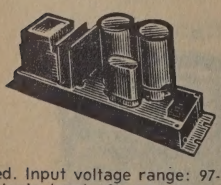
REGULATED DC POWER SUPPLIES



Furnish fixed DC output voltage within ± 1% tolerance while input AC voltage varies ± 15%. All units feature rugged magnetic and semiconductor circuitry and are designed for chassis or standard 19" rock mounting. Short-circuit current is limited to approximately twice the rated value. Can be installed with either polarity grounded. Input voltage range: 97-130VAC, 60 cps, 40°C ambient. Output ripple level 1% rms max. Efficiency 70-85% for normal output levels; efficiency may decrease for unusually low output levels.

Controllers, Transformers and Powerdials

OHMITE

OHMITROL SOLID-STATE POWER AND MOTOR CONTROLLERS

Power controls are adaptable to a variety of applications because the built-in trimmer sets the starting point of the control voltage anywhere between 0 and 70 volts for 1 W models; 0-200 on 2 W models. Infinitely smooth control is obtained from start to full line voltage. Two-way terminals accept quick connectors or soldering.

Output is RFI filtered. Component models mount with 3/8"-32 bushing on aluminum panel for heat sink. Portable models are self-contained. Sizes: component models 1¾"sq. x 1" behind panel; portable models: 4¼" x 3¼" x 1 13/16". On-Off switch at end of control knob rotation.

Series Block	—	Base Block	—	Lens Cap Block	—	Miscellaneous Block

95-0408-0931-341

All complete indicator lights, consisting of a base assembly and lens cap have the above configuration:

A. First or Series Block identifies a specific series. In our example, 95 designates one of our miniature indicator light lens caps.

B. Second or Base Block identifies the lamp base, terminal style and specific lamp accommodation. Lamp socket: 04—(miniature bayonet base, solder terminals) and the specific lamp type:—8 BIA (NE-51).

C. Third or Lens Cap Block 0931, identifies the shape and material of the lens, 09— (stovepipe, plastic) the lens finish,—3— (transparent), and the color, —1 (red).

D. Fourth or Miscellaneous Block 341, identifies the metal finish, 3— (polished chrome), the built in resistor value,—4— (56 ohms), and the mounting hardware, —1 (brass).

Because there is a great commonality of base assemblies and lens caps which combined have different indicator light part numbers, you will frequently need to recognize a base assembly part number and a lens cap part number. The Dialight Master Index lists, numerically, the part numbers of complete indicator lights, and their component base assembly numbers and lens cap numbers.

Using our original example, the complete indicator part number, 95-0408-0931-341 is made up from the 95-0408-09-341 base assembly and the 95-0931 lens cap.

Another complete indicator light. 135-0408-1431-341, uses the same base, 95-0408-09-341, but with a different lens cap, 135-1431.

A typical base assembly number has this configuration: 95-0408-09-341. Note, in this case, that the number is the same as a complete indicator number except that the third or Lens Cap Block is incomplete. There is no lens finish or color to be described in a base assembly. We must, however, know what shape lens the base was designed to accommodate and therefore we need the 09 in the base assembly number.

A typical lens cap number has this configuration: 95-0931. This number describes the series in the first block and the second block describe the lens shape, material, lens finish and color.

There is another variation to lens cap numbers and that is when the Miscellaneous Block is added to the lens cap number. The Miscellaneous Block is added when the lens cap is not all plastic and includes a metal lens holder. 51-0113-300 describes a lens cap in another series with a metal finish, designated by 3—(polished chrome).

The Miscellaneous Block is also added when hardware is included with the lens cap. 95-0931-003 is a lens cap with water-tight hardware designated by the —3 in the Miscellaneous Block.

•NEW 710 SERIES NUMERIC READOUT

Smaller size 710 series lighted modules for readout of 10 numbers and letters in bold one inch characters. Readouts assembled are most legible displays possible in presentations of one inch characters. Provide error free readout at over 30 feet. When viewed through proper contrast filter, lighted segments have high contrast to background and those not lighted merge into background. Designed for permanent mounting of either front or rear parts on a common support. Accept only T-1¾ bulbs with midget flanged base. Incandescent lamp No. 344 @ 14-16 volts is used mostly, assuring long life. Two useful options are available: a similar Module to basic 710 with integral point in lower position, after digit, for display as decimal; or an inverted form where point is in upper position ahead of digit for use as colon. It is, of course, necessary to use a pair of these for the full colon. Decimal point and colon are presented in a normal relation to digits.

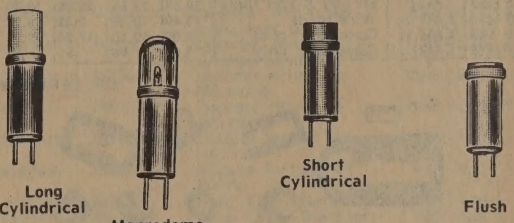
CML SERIES NEON CARTRIDGE INDICATORS

Cartridge housings with neon lamps. Four cap styles: Flush with panel, minimum protusion, ideal for front viewing. Short and Long Cylindrical extend approximately .26" and .50" above panel respectively enabling 180° visibility. Macrodome extends .46" above panel and affords 180° visibility for side viewing. Cap material of polycarbonate to resist color fading and high temperatures from continuous illumination. Five cap colors—see To Order below. Housing of clear anodized aluminum with nylon insulator. Stainless steel pin terminals are mounted off center to



insure polarization and one-way insertion when legends are inscribed on caps. Neon lamps have built-in resistors (see table, left). Meet MIL-L-3661 specs. Cartridge bodies extend approximately .634" deep measured from front of panel and have a diameter of .284".

***To Order Cap Color:** In place of 'X' in type column be sure to substitute cap color numeral denoting the cap color desired. 1—Red. 3—Amber. 5—White. 6—Yellow. 7—Clear. Cap colors Green and Blue (2 and 4 respectively) are not recommended for use with neon lamps.

CM21-3 SERIES CARTRIDGE INDICATOR CONNECTOR

Indicator pin terminals plug directly into CM21-3 providing rapid installation. Phenolic body, cadmium-plated brass contacts.

36F0016 Each **40c**

CM21-5 SERIES RIGHT ANGLE SOCKET

For CML Series cartridge indicators. Mount at right angle directly into printed circuit boards with four electro-tin plated brass terminals. Rear terminals provide contact and front terminals provide anchoring support. Phenolic housing is raised off board by 3/64" to allow gas venting and clearance for eyelets.

36F0017 Each **1.03**

CM21-14 SERIES SWAGE MOUNTED SOCKET

Accept CML cartridge indicators and are designed for swage-in mounting from rear of a 1/16" panel. Clear anodized aluminum is used for housing with phenolic insulator. Terminals are phosphor bronze with a fused tin finish. Flush panel appearance and 7/16" center mounting makes possible a high density.

36F0018 Each **59c**

CML SERIES CARTRIDGE HOLDERS

Panel mounting holders for T-1¾ and T-2 lamps. Body, collar and facing nut are black anodized aluminum. Molded phenolic insulation. Turret terminals are spring brass, gold over nickel plate. Solder cup terminals are spring brass, tintillate plate. Types 10202-1 and 10203-1 have 1/2" thick knurled collar nut. Mount in round or "D" hole, .375" diameter. Terminal pins are polarized.

Chicago Miniature Beam Emitters, Readouts & Filters

CM20 SERIES BEAM EMITTERS

Compact assemblies specially designed to project narrow cones of infrared and luminous energies over distances of three to twenty inches. The spots produced are round in shape and vary in size from ⅜ inch to ¼ inch depending on projection distance. Infrared outputs are approximately 75% of input powers making the units ideal for use with silicon type sensors. Also provides low power consumption of 782 milliwatts, axially aligned spots, long life and easy mounting. Typical uses are energy sources for optical limit switches, optical encoders, tape sensors, etc. Spot characteristic: An axially aligned target circle equal to ½ diameter of the projected spot will be covered. Black anodized aluminum housing, No. 24 A.W.G. stranded wire leads, semi-resiliant thermosetting resin encapsulation. With all necessary mounting hardware.

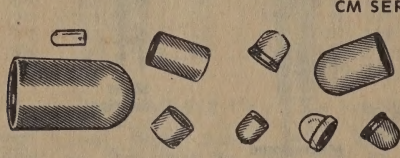
CM SERIES 39 LAMP FILTERS



Slip-On Filters are translucent precision molded silicone rubber for subminiature and miniature lamps. Impervious to color shift. For consistent filter color control, every production lot is tested and color verified by Spectrophotometric Analysis. Readings are charted to C.I.E. standards and recorded. This control permits precise duplication of color for standard production filters, or filters developed for special applications. CM39 Series Lamp Filters can be developed to meet any C.I.E. color level. For special requirements, contact Newark.

MS-4000B 7-seg, incandescent readout has display that is clearly read under all ambient lighting cond. Flat, single-plane display allows wide-angle viewing without distortion. Large character size (.325" x .600") relative to case size (.552" x 1.18"). Makes use of high temp. material housed in a 1 piece black matte metal case. Terminal pine are nickel-plated brass. Lamps are closely fitted into a compartment block with short leads virtually eliminating vibration problems. Vibration test: 2000c/s. Lamps separately lit to form any numeral as desired by use of an external decoder/driver. High reliability, long life.

MS-4100- as above, but with decimal and a slightly smaller figure. Ext. dimens. same as above. (C) MS-250A- smaller version of 7-seg. display 0-to 9 characters. Snapmnt socket. Plastic housing. MSDD Series 7-segment Decoder-Drivers are monolithic MSI intefrated circuits which decode BCD (8-4-2-1 code) inputs to 7-line outputs representing a decimal number from 0-9 an 7-seg. incandescent display devices. 30MA per line devices are: MSDD 700 with dec. pt. and MSDD701 with ripple blanking, both are for use with Alco MS-250 series. 80MA per line devices are: MSDD-702 with dec. pt. and MSDD-703 with ripple blanking; both are for use with Alco MS-4000, MS-6

MS-6 and MSM-5 series. Devices supplied in 16-dual inline plastic pkgs. which can be used over the oper. temp. range of 0-C. to +75-C.

MTX series Decimal-to-Seven Segment Decoders, designed to drive Alco MS-4000B and MS-250A readout indicators. MTX Decoder consists of integrated circuit using a diode matrix which allows you to easily display o to 9 (MS-4000B), and 0-9 numerals & decimal point (MS-250A). Alco readouts plug in directly to the logic module that has connections made thru a 9-conductor flat cable. The MTX-4000 Decoder and MS-4000B readout indicator can be installed in the MS-4FB bezel, and mnt. assembly provides up to 5 modular digits.

MS-4FB Bezel has a top and bottom aluminum extrusion. Assembly provides a max. of 5 mod. digits. Rear blocks accept skts. generally supplied with readouts. Comes complete with red filter; less skts. and 1" mntg. screws. Use with clear readouts.

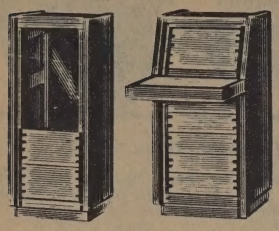
BUD Cabinet Racks



SERIES 2000 (IN MODERN COLORS)

The creative industrial deisgner's conception of what image the modern electronic enclosure should convey to enhance the prestige of the contents. It combines the dramatic appearance of sheer, square lines with rugged construction. Together with its unique facade, it offers many exclusive features and economies inherent in all Bud products. One of the time and cost saving benefits of the Series Two Thousand Cabinet Racks is the fact that they are shipped completely assembled and immediately available for use upon removal from the protective carton. The basic frame is all-welded construction employing 14 gauge steel members. 18 gauge steel is used in the door, sides and top. "U" braces welded to the sides of the frame augment its strength and rigidity and act as the mounting for the vertical rails, which may be horizontally adjusted. Front panel mounting rails are tapped 10-32. Rear rails are pierced 9-32. Caster bracket in base is drilled for Bud RC-7758 casters. Standard finishes are Royal Blue (RB) or Gray (GT), Textured enamel with clear anodized aluminum cowl and Gold (GD) Textured with gold anodized aluminum cowl.

BATTERIES

STANDARD LINE CYLINDRICAL CELLS—1.2 VOLTS

Rechargeable batteries of any voltage may be obtained by connecting G.E.'s cells in series. Example, to obtain 12 volts, ten G.E. 1.2 volt cells would be connected in series.

Cylindrical Cells provides maximum discharge rates and capacity. Suited for cordless consumer and electronic products. General Electric cylindrical cells feature a resealable vent mechanism designed to relieve any harmful or unnecessary pressure build-up

BATTERY CHARGERS

For Nickel Cadmium and Lead Acid Batteries. Manufactured by the world's largest manufacturer of battery chargers, Electronic Components Corporation. Each battery charger includes an isolation transformer tested at 2000 V RMS and is completely potted, eliminating any possibility of shock, even if accidentally immersed in water. Extremely economical, costs less than the components if purchased separately. Charges cells in series with half wave rectification. Output leads are stripped and tinned; appropriate battery clips, connecters, and alligator clips are listed elsewhere in this catalog.

Nickel-Cadmium Batteries: Manufacturers recommend a charging current equal to 10% of the battery's capacity (1 ah battery, use 100 ma). Such a current will never damage the battery, even after it is fully charged. Full charge takes 14 to 16 hours.

Lead Acid Batteries: Follow battery manufacturers' recommendations. Unless using an extremely small trickle charging current, it is usually necessary to remove the charger once the lead acid battery is fully charged. Charging time determined by charging current.

Voltage Regulators & Paraformer™

PARAFORMER™— A NEW CONCEPT IN A.C. POWER CONDITIONING

Provides voltage regulation and noise attenuation of over 50DB over a frequency range of 0 to 1 MHz. As shown by Equation #1, electromotive force, and hence the transfer of electrical energy can be achieved in two ways: (1) by flux coupling, or (2). by parametric coupling. Existing passive devices such as transformers and ferroresonant transformers depend almost exclusively on the flux coupling term of Equation #1. However, Wanlass Electric has now invented a new component, the Paraformer™ , which operates exclusively on the basis of parametric coupling and consequently is a device in which the flux coupling or mutual inductance is zero. (Thus, all energy is passed by the i dL/dt term of Equation #1.)

$$E = \frac{d}{dt}(Li) = \underbrace{\frac{Ldi}{dt}}_{\text{Flux Coupling Term}} + \underbrace{\frac{i\,dL}{dt}}_{\text{Parametric Coupling Term}}$$

The advantages are listed below in Table 1.

TABLE 1

	Transformer	Ferroresonant Transformer	Paraformer
Line voltage regulation	None	±1%	±½%
Line filtering (noise)	No	Slight	Over 50 db
Load filtering (noise)	No	Sight	Over 50 db
Overload protection	No	Partial	Yes
Low line protection	None	None	Yes

As noted from Table 1, the Paraformer™ is inherently a line voltage regulator and line power filter. In fact, the Paraformer's most useful property appears to be its ability to prevent line voltage fluctuations from reaching the load. As will be noted from the above table, such fluctuations (noise, distortions, etc.) are atenuated by over 50 db for frequencies from a few cycles per second up to 1 megacycle per second.
Designed specifically for OEM applications. 60 & 400 Hz in ratings from 60VA to 1000 VA.

	60Hz	400 Hz
A.C. Input:	115VAC±10% (Nominal, 10, 60Hz (50-150VAC)	115VAC ±10% (Nominal) 10, 400Hz (50-150VAC)
A.C. Output: Regulation:	117VAC, 60Hz, 1 Phase ±0.5% Line; ±2.0% Load	117VAC, 400Hz, 1 Phase ±1% Line; ±2.5% Load

Having noted the outstanding advantages of the Paraformer ™, it is perhaps appropriate to note the simplicity of the device.

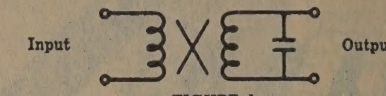

FIGURE 1

As shown in Fgure 1, the Paraformer consists only of a primary winding, a secondary winding, a magnetic core and an AC capacitor. No other components are used. After reviewing the symbol, it is perhaps important to restate that the Paraformer™ is not a ferroresonant transformer. The mechanism for energy transfer is entirely different and most of the basic characteristics are entirely different.

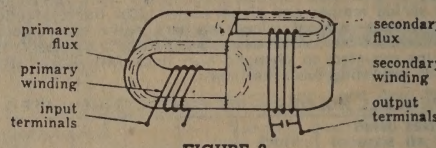

FIGURE 2

Note that the geometry is such that the primary flux does not link the secondary winding and that the secondary flux does not link the primary winding. (Accordingly, the classical flux coupling is zero). However, note that the primary flux does modulate the reluctance associated with the secondary flux and hence the primary does modulate the inductance of the secondary. This modulatign can be achieved only by transferring electrical power from the primary to the secondary. This power in turn sustains the secondary oscillations and delivers power to the load. It is this unique parametric power transfer mechanism that makes the Paraformer™ a revolutionary new component.

Wanlass Clip-AC Voltage Regulation

WANLASS CLIP-AC

CLIP-AC REGULATOR PRINCIPLE

AC regulator is logical successor to ferroresonant transformer for bulk of AC regulation requirements up to 1KVA. Regulation is achieved by symmetrically clipping (dissipating) peaks of incident sinusoidal waveform. Unretouched scope photograph reproduced in Fig. 1 shows that except for these peaks, output waveform is identical to input waveform. Fig. 2 shows in block diagram form how regulation is achieved. Output voltage is continuously monitored by sensor which uses zener diode as reference. Associated control circuitry in turn adjusts clipping level of pass transistor in order to maintain desired output. Economy of design has been realized by using a floated reference and a diode bridge to make it possible for same pass transistor to be used on both halves of AC cycle. SCR shown in block diagram is used to accommodate short duration surge currents such as those encountered in charging capacitors, starting motors, or starting lamp loads. Under such conditions, bias resistor triggers SCR and excessive current surge is by-passed around pass transistor. Should these excessive current conditions persist, input fuse would be blown, thereby protecting unit. Under Normal operating conditions SCR is inoperative.

AC TRUE RMS VOLTAGE REGULATOR

Both a line and load regulator. Regulation is achieved through a unique clipping circuit which senses RMS and clips output voltage at a fixed RMS level. Regulation covers 100-130 V input, 47-420 Hz. Line and Load regulation ±0.5%. ±0.5% power factor regulation from +0.7 to −0.7. No phase shift. Response time 10 to 50 ua-sec. Ambient operating temperature: 0 to 50°C. Temperature coefficient .0.025% per degree C. Ideally suited for photo-optical applications where light intensity must be held constant, in addition to any other application where RMS regulated power is required.

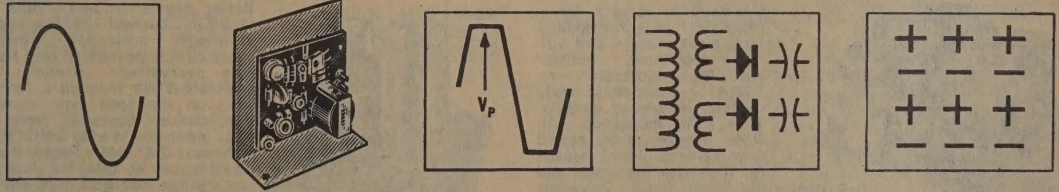
"DO YOUR OWN THING"—BUILD YOUR OWN LINE REGULATED DC POWER SUPPLY WITH THE NEW WANLASS MODEL CVR-120 CLIP-AC PEAK REGULATOR



100-130 V. 47-420 Hz 1 Phase A.C.

Model CVR-120

V_P=135 V

Transformer rectifier filter for 1 or more DC outputs

1 or more line regulated DC outputs

- **Adjustable Output Voltage**
- **Size and Weight—120 Watts of Regulated Power For 10 oz.**
- **Frequency Insensitive—No Variation of Output Voltage with Varying Line Frequency**
- **Line and Load Regulation—Precision Unattainable with Ferro-Resonant Transformers**

The CVR-120 is a CLIP-AC™ type peak clipping AC regulator, designed specifically for use as the regulating component for your D.C. power supply designs. By symmetrically clipping the peaks of the unregulated input voltage, a constant peak to peak output waveform is produced. This voltage can then be transformed into a variety of regulated output voltages through the use of an appropriate transformer. Rectification and passive filtering of these resultant voltages will then produce regulated D.C. output voltages. Type of voltage regulation (peak). Regulation technique peak clipping. Type of reference (Zener Diode). Input 100-130 VAC 47-420 Hz. Output 135 volts peak (270 volts peak-to-peak). Power capability 120 VA. Line regulation (±10% line variation); (1.0%). Load regulation (0 to full load). (1.0%). Power factor regulation (+0.7 to −0.7): (1.0%). Phase shift-none. Response time 10-50 μsec. Temperature coefficient: 0.025% per degree C. Ambient temperature: 0-40°C (higher with derating). Dimensions 4"W x 4½"H x 2½"D. Weight 10 oz.

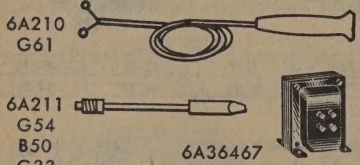
MIGHTY MIDGET, 12 VOLTS



These units are excellent for applications which require medium-duty repetitive production soldering where up to 200 watts are normally required. These light weight 7-ounce units use a midget-style heating unit and will do the work of irons twice as heavy. For high heat storage capacity and rapid recovery a high-wattage low voltage heating unit is used in a large-diameter tip. Handle comes with a two conductor coiled cord which extends to 6 feet with eyelets for transformer connection.

SOLID-STATE ULTRA-SONIC CLEANERS AND ACCESSORIES

Save time and money with an industrial quality ultrasonic cleaner. Fast-acting, easy-to-use and simple-to-operate. Has single pilot-lighted on/off switch. All models are self-contained and self-tuning — never need adjustment. There is a size for almost any work situation in your plant. Cleans virtually any small item or assembly. Eliminates the necessity of carrying small items to a central point for cleaning. Sound is introduced into liquid in the cleaner tank, creating millions of microscopic bubbles which expand and collapse. These implosions act like millions of tiny scrub brushes, driving into virtually every area to be cleaned. The action invades any surface where liquid can go, even by capillary action. Uses any cleaning solution applicable to other cleaning methods now in use. For operation from 110-120 volts, 50-60 Hz AC. *Indicates cleaning power in watts; † indicates shipping weight.

SEALANT

Loctite anaerobic compounds are single component resins furnished as liquids which self-harden into tough plastic bonds when confined between close fitting parts. When used with standard fasteners, Loctite will provide shock and vibration proof assemblies superior to mechanical fasteners. When Loctite is used with aluminum parts, plated parts or with thermoset plastic materials, the Locquic Primer is recommended for optimum performance.

MAINTENANCE KIT

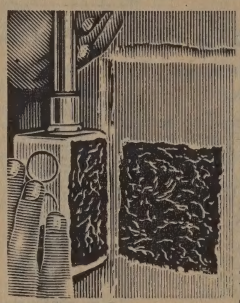
ECCOBOND 285



General purpose black rigid adhesive paste which may be cured with one of three curing agents supplied; Catalyst 24LV — room temp. cure — 30 min. pot life — lowest thixotrophy and viscosity and will soften above 250°F; Catalyst 9 — room tem. cure — 45 min. pot life — highest thixotrophy and viscosity may be used up to 300°F; Catalyst 11—requires oven cure—4 hr. pot life—high thixotrophy with medium viscosity and may be used up to 350°F continuous duty, with short time exposure to 400°F. When cured produces high strength bond to most materials including metals, glass, ceramics, and most plastics, performs equally well on porous or non-porous surfaces and has excellent resistance to water and chemicals. Coefficient of thermal expansion is much lower than commonally available adhesives. High thermal conductivity. Combination works well to overcome bond failure due to thermal cycling.

RTV-630. Molding compound is excellent for short-run or prototype parts, thermoforming punch dies, intricate molding, and embossing. Precise reproduction of detail, can be used with automatic equipment, ideal for production line use. High strength RTV-630 is packaged as a kit containing the silicone rubber base compound, designated "Part A" and a catalyst, "Part B". Cure by mixing 10 parts "A" to 1 part "B" by weight.

Zinc-oxide filled compound for grease applications where lubrication is not a factor, but good electrical properties are needed. Ideal for heat transfer and shock resistance use in semiconductor manufacturing applications. For extreme temperature applications. Non-corrosive, water resistant, and non-solidifying. 4-oz. jars.

A remarkably stable product, it is effective from —50°F to +400°F. It will not emulsify or harden, will not flake and is non-staining. Its anti-moisture, anti-corrosion protection depends on relative degree of exposure to moisture of equipment being protected. Conforms to MIL-C-81309 (WP).

OVERLOAD PROTECTED TAUT BAND

Model 260-6P A virtually "goof-proof" overload protected version of the world famous 260 VOM. The 260-6P incorporates electronic circuit protection which senses overload conditions and trips a protective relay. The entire tester is protected—even when 110 volts is applied to the 1 milliamp or 50 millamps range, no damage is caused. No chance of "fooling" this protection, either as with some other "burnout proof" V.O.M.'s. It can't be reset — even momentarily — until the overload has been removed. A "must" for labs, schools, shops or wherever mortality rate of V.O.M.'s is apt to be high. Complete with test leads and operator's manual. Size: 5¼ x 7. Wt. 9½ lbs.

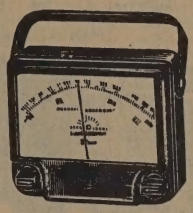
TEMPERATURE METERS

388-3L THERM-O-METER



The Therm-o-meter measures the temperature of air, gases, liquids, or solids by means of thermocouple type leads from —50°F to +1000°F. Both Fahrenheit & Centigrade readings can be made in 15 to 30 sec. and up to a distance of 7½'. A selector switch on the 388-3L connects any one of the three leads into the meter circuit. The lead wires are small enough to pass through a closed door and gasketing. The meter movement is self-shielding. A compensator circuit automatically corrects room temperature effects from 60 to 100°F. With one general purpose lead, battery, and operator's manual. $7\frac{15}{16}$x6x$2\frac{15}{16}$". Digital VOM

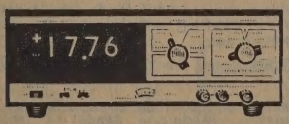
NEW DIGITAL VOLT-OHM MILLIAMMETER



Model 8000A Digital V-O-M features three gas-filled readout tubes and a neon lamp to indicate 1000, a moveable decimal point, automatic over-range indication, and autopolarity on DC. Sample rate is 6 times per second. Offers added facility of instant replay memory circuit. Retains readings indefinitely up to 50% over range with true accuracy. Protective circuitry prevents damage to tester when voltages as high as 1000 volts AC or DC are applied as inputs on any selectable voltage range of the unit. Ruggedness and reliability are achieved by the use of solid state components in conservatively designed circuits. There is virtually no internally generated current in the input circuit of the V-O-M to cause errors in reading. High accuracy with nearly perfect linearity and 10-megohm input resistance. This is especially valuable in high resistance circuits.

Annular panel instrument construction. Century Series panel instruments have rugged phenolic cases and glass windows. Movements have stay-accurate dependability. DC movements have spring-backed pivot and jewel. AC movements have self shielding magnetically damped iron vane.

Damping is achieved by moving a metal vane through a magnetic field. This motion induces currents in the vane which sets up magnetic fields opposing those of the stationary magnets thus tending to bring the pointer to rest.

MODEL 1941 TAUT BAND DC METERS

- No pivots and jewels eliminates pivot friction
- Error due to pivot fall-over is eliminated
- No movement springs eliminates spring-set or hysteresis
- Are physically interchangeable with pivot and jewel 1900 series
- Require less driving energy
- May be operated in any position without degrading performance
- Are four times more sensitive than conventional meters

Super sensitive panel meters recognized for top reliability and dependability. Rated accuracy at ±1% for 4½" supplied knife edge pointer and mirror scale, also ±2% accuracy for 3½" and 4½ size. Have specially treated acnico 5 magnets for long-term stability. "Taut Band" mechanisms provide high sensitivity, ±2% panel meters have lance-type pointer and 100 arcs. Attractive "plastic" fronts and statnul treated to remain completely static-free, screwdriver slotted zero correctors are provided. Miliammeters with ranges of 30 MA or higher are shunted and have 100 millivolt drop. Ammeters have approximately 50 millivolt drop. All panel meters meet ASA electrical requirements in Spec. no. C-39.1 for indicating instruments with 2600 volts RMS, AC dielectric tests. Av. Shpg. wt. 12 oz.

ALL TRANSISTOR INTERCOMS

"CHIEF" MASTER STATIONS

Can be used in any combination—with all Masters—one Master and Staff Stations—or a number of Masters combined with Staff Stations. 6, 12, and 20 Station Masters, together with Staff Stations can be intermixed in same system. Masters can talk with any other Master, as well as with Staffs. Staff Stations can be answer all Masters and can originate calls to one or two "private" Masters, depending upon Staff's capacity. Staff Stations are not connected to electrical outlet.

Exclusive Features: (1) Dynasonic Design enables stations to perform "privately" (so no one can listen in) or "non privately" (for reply without use of controls). The same station can be "private" to one or more Masters and "non private" to others. (2) Monitoring signal visually indicates to a "non private" station that it is being monitored. (3) Busy signal visibly indicates when station you call is "busy". All units have facility to override "busy signal" for important calls. (4) Multi-magic station selector enables selection of up to 30 stations with only 12 push buttons. (5) Uni-trans dictation control. (6) External relay control enables Master to activate external relays for operating siren, gong, light, etc. (7) Reciprocal Power supply—Each Master operating on 120 volts AC only and should be plugged in Where no electrical outlet is available up to 30% of the "Chief" Masters in the system can operate without being plugged in (8) Noise free voice range power. The exclusive patented circuit enables performance without noise, hum or distortion, when used with talk-a-phone cable. (9) Hi power staff stations and horns. K-HP-3 provides more than twice the volume of universal Staff. K-C-20 provides about 4 times greater volume. . . more with Redi Power Master. (10) Wall switch combines with Talk-a-phone Horn or Hi Power staff to add origination of call feature. (11) Incoming call chime. All "Chief" and "Chief Redi-Power" Master Stations come complete with junction box and built in power supply attached by 6' flexible cable. Master size: 14" width, 3⅛" height, 8¾" depth. For 120 volts AC only. U.L. listed.

"CHIEF" REDI-POWER MASTER STATIONS

"Chief" Redi-Power Master Stations have built-in extra power. This added power (up to 30 watts), gives you the additional volume required when calling a number of stations at one time or calling noisy locations. Satisfies need for power boost without eliminating return speech. Volume is self-compensating whether, 2, 6 or 12 stations are called simultaneously. Each station receives its pre-determined volume with no division of output when more stations are called at one time. One or more Redi-Power Masters can be combined with regular Chief Masters and staff stations in some system. Other features include: (1) Incoming call chime. (2) Monitoring signal. (3) Dynasonic selector that permits intermixing of Master and Staff Stations and variation of performance. (4) Volume Control. (5) Noise-free voice range power. (6) Multi-magic station selector which enables selection of up to 30 stations with only 12 push buttons. (7) Uni-trans dictation control. (8) Operation on 120 V. AC. (9) External relay control for use in extremely high noise level areas. (10) In modern, custom-designed cabinets. Charcoal gray and brushed chrome. Size 14x8¾x3⅛".

CHIEF STAFF STATIONS ACCESSORIES

For use with any "Chief or Redi-Power Master. Staff Stations may be connected "privately" or non-privately". Connected "non-privately", Master can be answered at a distance from the Staff without operation of any controls. "Non-private" Staff may reply to all Masters in the system (whether connected directly to them or not) and can originate calls to one or two, depending upon its capacity. Connected "privately" no one can "listen-in", but any Master can call. Private Staff can originate calls and reply to 1 or 2 Masters depending on its capacity. HOW TO DETERMINE CABLE REQUIREMENTS

K-S-111

To inter-connect Master Stations, measure from first Master to second Master only, from 2nd to 3rd Master only, etc., until last unit in system is reached and total. For K-C-4920 use two lengths to 6226 Cable. To connect K-C-41, K-C-20, or K-HP-3 Staff Stations, measure from Staff Station to one Master to which Staff Station originates calls. To connect K-C-42 Staff Stations measure separate length of cable from Staff Station to each Master Station to which staff originates calls.

PETERSEN RADIO CRYSTALS

The wide variety of applications and frequencies in which crystals are used makes it necessary to custom manufacture many parts. Although many frequencies in the types listed are carried in stock, the crystal you require may have to be ordered from the manufacturer. In this event, the time required for delivery may be 4 to 6 weeks. Orders for crystals are non-cancellable and non-returnable (except for defective units). Where stock numbers are shown, please order by that number. All others should be ordered as "special." Be sure to specify exact frequency required within the ranges listed.
